

## Surface treatment

The surface to be painted must be free of grease, oil, water, dust or other impurities that can hamper a good adhesion. This cleaning can be done in different ways, depending on the condition and the possibilities. **Eco Degreaser** can be recommended as a good bio-degradable product (use: see technical data sheet). On new, untreated surfaces where a long protection is expected, **Durozinc HS Allprimer** is recommended as an appropriate primer. On galvanization and aluminium a barrier and adhesion coat such as **Durozinc HS Allprimer** is necessary.
