Fantastic features for shop floor use

Automatic scale check

On start up the user is led through the menu to set the scale origin and run the automated procedure to check the scale for contamination.

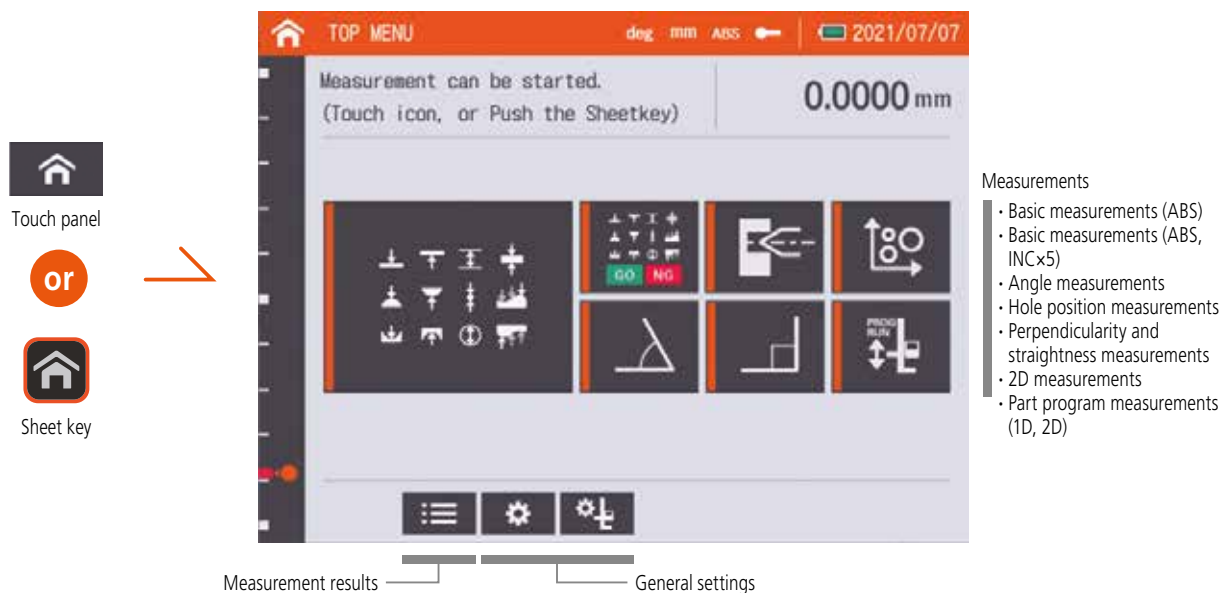

Calibration reminder

A notification will be displayed before the calibration due date that the user has set.

Home screen

With the intuitive menu, even beginners can easily access various operations and settings.

Guidance and measurement navigation

Available in 21 languages, each measurement step is displayed in a way that is easy to understand for the user.

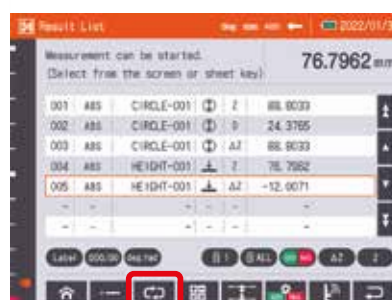

Operation log

Operation log data is retained for up to 2 months, and can be output to a USB memory device.

Repeat measurement function

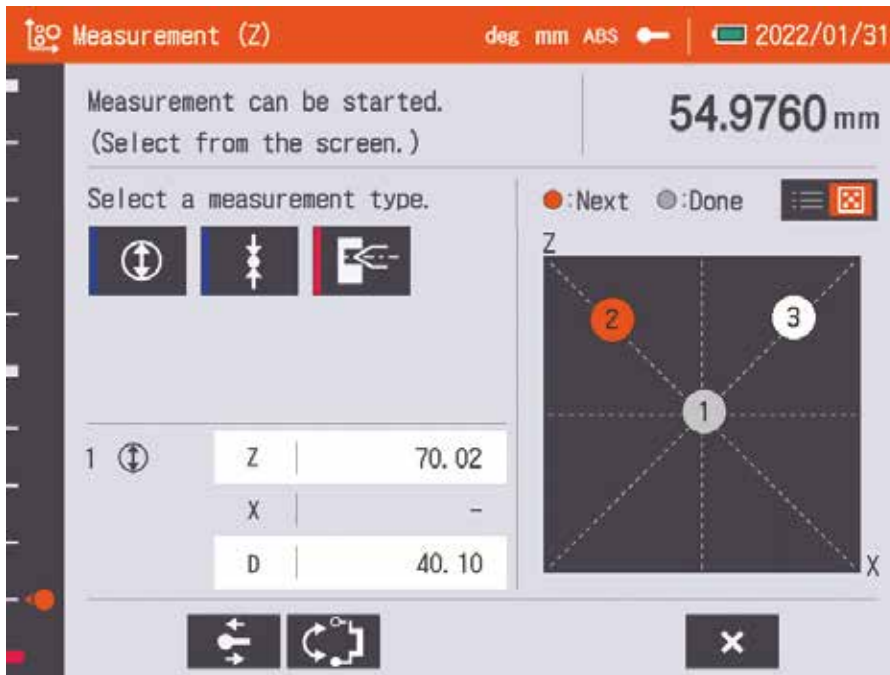

To enable efficient measurements the user can repeat the last measurement with the optional footswitch or on-screen button.

Various measurements with just one unit

Improved usability and accessibility, including advanced measurement functions

2D measurement "Pre-placement"

This function allows the user to register the hole position of the workpiece before measurement.

Perpendicular/straightness measurement "Graph Creation"

You can check the measurement results of perpendicularity and straightness in real-time during measurement. After the measurement, you can easily see the trends of the measurement results in a graph.

Part program measurement

You can easily access and use the functions of Create, Run, Edit, and View results of part programs.

Example of performing part program measurement

Run the program repeatedly (when the number of executions is >1)

Copy part programs to other devices

You can copy part programs to other devices via USB storage device.

Expanded measurement area

With the new optional probes, you can now measure areas that were beyond the capacity of conventional probes.

Example of deep hole measurement

Optional probes provide versatile measurement capabilities

An extension holder and a depth stylus extend the measuring range both horizontally and vertically

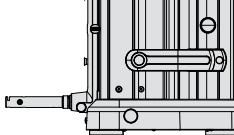

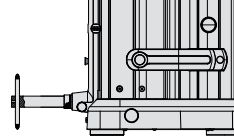

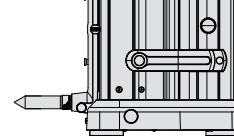

Three types of optional probes:

1. The holder and the stylus can be freely combined according to the purpose of measurement, and the measurement area can be changed.
2. This type is used for single-use measurements such as measuring a tapered hole or a knife edge.
3. This type is used to measure straightness and perpendicularity.

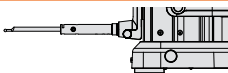

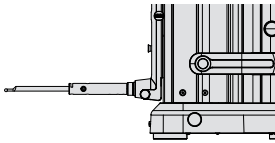

You can adjust the balance of the slider by adjusting the number of auxiliary weights.
(Magnetic auxiliary weights are easy to add and remove.)
